# Doctor Machine®

## Model 352

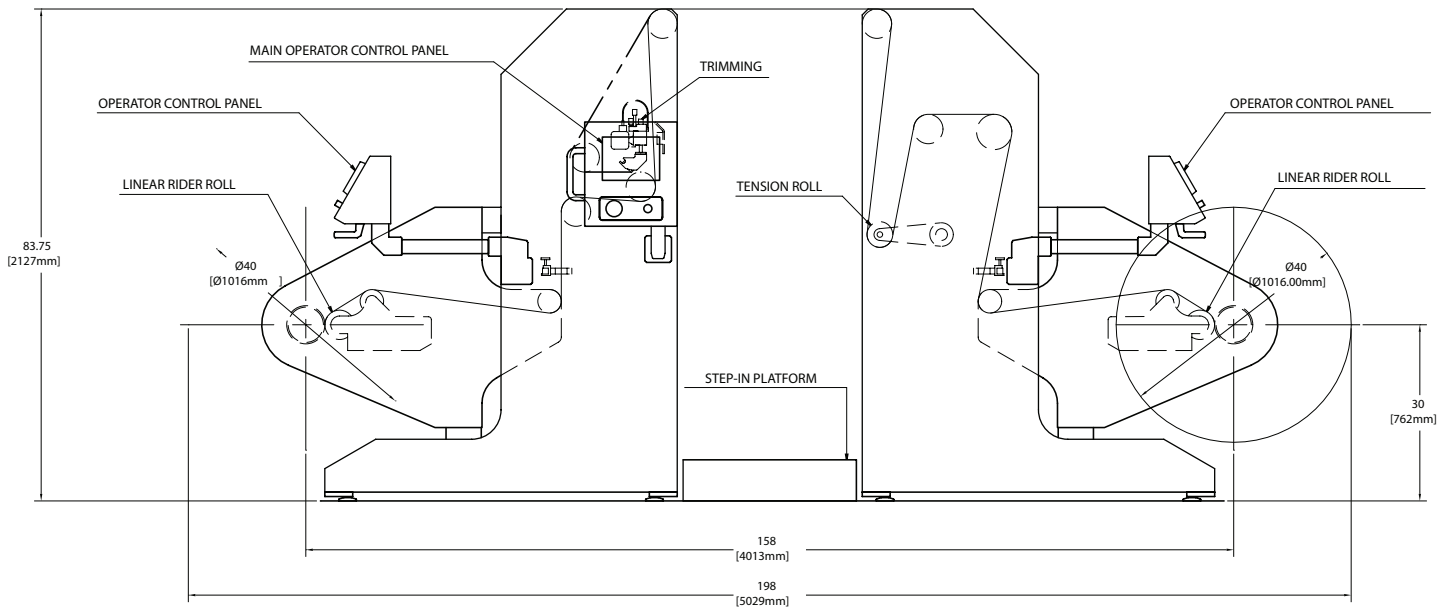

The Stanford Model 352 provides an effective method of removing defective printing, repairing splices, re-tensioning and edge-guiding rolls of material. The 352 will handle a wide range of materials including films, film-laminates, paper, business forms and pressure sensitive label stock. Operational speed is up to 2000 fpm (610 mpm). The three touch screen control panels define user friendly and clearly display all running parameters during operation.

With optional razor or shear trimming available, as well as a facility for overhead print inspection, the machine has a level of versatility unique to the marketplace. Among its most notable features are newly designed linear rider rolls which offer fully programmable and constant pressure throughout roll buildup.

Stanford engineers a large selection of Doctor Machines®, as well as a complete line of duplex differential slitter rewinders and shrink sleeve finishing equipment.
